Bourns® Model PDA17 Rotary Potentiometer Upgrade

In line with our commitment to product excellence, Sensors & Controls introduces a product improvement to our popular [Model PDA17-SS](#) 17 mm Rotary Potentiometer. The product upgrade entails an assembly improvement of the shaft to the switch actuator. Please note that **this change affects the switch version of this product** only. The non-switch version is not affected.

As detailed in the photos below, the design upgrade eliminates the use of a c-clip to affix the switch actuator to the shaft. The new design incorporates the use of a riveting process to firmly secure the switch actuator to the shaft.

Old design with c-clip

New design with rivet process

The changes to this product do not affect current compliance to RoHS requirements. This upgrade **does not affect, form, fit or function.**

Product with the improved design will begin shipping starting with date code 0519.

There will be no changes to current prices, minimum order quantities or multiples.

Please ensure that your customers are notified of this product upgrade. Feel free to contact one of our Field Application Engineers if you have questions or require additional technical assistance and qualification samples
