

PRODUCT UPDATE MEMO

ENCODERS

Revised December 1, 2022

Update to ASIC Product Change Notification SC2110 Issued April 8, 2021

Model EM14 and EN Series

Riverside, California – November 4, 2022 – On April 8, 2021, Bourns issued a Product Change Notification regarding ASIC (Application-Specific Integrated Circuit) modifications for certain Model EM14 and EN Series Rotary Optical Encoders. As disclosed in the Product Change Notification, the supplier tooling change for the ASIC used a new process. This new process resulted in extra pulses at the rising edge when rotating at low rpms. A correction has been added to the process consisting of inserting hysteresis at input to the Schmitt Trigger to eliminate spurious spikes at output. A previous data sheet statement regarding the need for a pull resistor and capacitor is no longer required and the data sheets have been updated to reflect this information. **For product with date codes after 2244M, The external pull-up resistors (1K ohms) and filter caps (22 nF) can be removed at customer's discretion.**

If you have any questions or need additional information, please feel free to contact Customer Service/Inside Sales.

To review the updated data sheets, please see the following links:
