

PRODUCT CHANGE NOTIFICATION

PRECISION POTENTIOMETERS

Marking Process for Select Bourns® Precision Potentiometers

Change from Ink Marking to Laser Etching

Riverside, California - December 19, 2023 – In the spirit of continuous improvement and environmental awareness, effective immediately, Bourns will change the marking process for select [Precision Potentiometers](#) from stamped ink marking to laser etching to increase the identification and traceability of some of our products. A list of affected part numbers is included on the following page.

The current product marking on the Precision Potentiometers uses a white marking over a blue or black background. The new marking will be laser etched over the blue or black background. The change to a laser etching process will have no impact on the fit or function of the product. The form of the product will change slightly due to the transparent laser marking on the outside of the product and the manufacturing process will change due to the use of a different marking process step. The quality and reliability of the marking on the product should be improved as a result of the process change. Quality test data is available upon request.

Samples are available upon request. Bourns recommends that customers test affected parts made with the new marking process change in their specific applications for verification of satisfactory performance.

Users should verify that the described changes will not impact the performance of the product in their specific applications.
