

Features

- IDC connection technology
- Easy to install
- Long service life
- Field retrofit kits available
- UL pending

Model 85122-IDC – IDC Expansion Module

Bourns now offers an Insulation Displacement Connection (IDC) module for the 7005 and 709X Series Network Interface Devices (NID). This module is designed to be connected to one incoming twisted pair and allows up to four additional Inside Wires (IW) to be deployed at the station. The modules are made of flame-retardant UL listed plastic. The IDC connections are simple to use; the untrimmed wire is inserted in the connector and snapped down. There is no stripping or winding required. The resulting connection is gas-tight, so no gel is needed.
