

Bourns REACH Efforts

January 6, 2012

As of June 2007, the European Regulation (EC) 1907/2006 concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH) entered into force. REACH will have significant implications for manufacturers, importers and downstream users for a wide range of chemicals.

As a downstream user of chemical substances, Bourns is fully aware of the requirements of REACH. We are working with our suppliers to confirm their intent register pertinent substances used in Bourns various product lines. It is our objective to fully comply with REACH securing the dependable supply of our products to our customers.

The Candidate List of Substances of Very High Concern (SVHC) was published on the website of the European Chemicals Agency (ECHA) in October 2008, January 2010, March 2010, June 2010, August 2010, December 2010, June 2011, August 2011 and December 2011; we continue to confirm with our suppliers that no SVHCs are present in the materials we use to manufacture our products (articles). This is an ongoing process as new materials and models are frequently being introduced into Bourns' many product lines. Based on our knowledge of the materials we use and the information from our suppliers to date, we do not anticipate the presence of any of the currently listed SVHCs in our products or in quantities greater than the threshold of 0.1% (w/w). If it is determined that any of our products contain SVHC, notification procedures per REACH requirements will be followed.
