Features

- Convenient storage of Fiber Optic (FO) cable
- Constructed of rugged Telecom-grade thermoplastic
- Accepts most manufacturers' NIDs
- Accepts many manufacturers' splice trays
- Entry and exit grommets
- Provisioned for ground attachment
- Custom versions available upon request

BOURNS®

7050 Series Fiber Storage Enclosure

Bourns® 7050 fiber storage unit provides a convenient, weather-resistant storage solution for future installations of FO cable. When fiber to the premises (FTTP) is planned but not yet implemented the copper NID and FO cable must both be available. By mounting the copper NID onto the 7050 the footprints of the two boxes are combined to reduce the amount of space used at the customer's location. The 7050 is compatible with Bourns and most other manufacturers' three, four and six line NIDs. Custom versions are available upon request.

Product Dimensions

High	Wide	Deep
355 (14.0)	222 (8.75)	38 (1.5)
