

## Features

- RoHS compliant\*
- Low capacitance <5 pF
- ESD protection
- Surge protection

 This series is obsolete and not recommended for new designs. The [Model TISP4G024L1](#) is the recommended replacement.

## CDSOT236-DSL03xx - TVS Diode Array Series

### General Information

The CDSOT236-DSL03xx device provides ESD, EFT and surge protection for high-speed data ports to assist in meeting IEC 61000-4-2 (ESD), IEC 61000-4-4 (EFT) and IEC 61000-4-5 (Surge) requirements. The Transient Voltage Suppressor array is available with a Working Peak Reverse Voltage of 12 V or 24 V.

The SOT23-6L packaged device will mount directly onto the industry standard SOT23-6L footprint and is easy to handle with standard pick and place equipment.

### Absolute Maximum Ratings, $T_A = 25^\circ\text{C}$ (Unless Otherwise Noted)

Rating	Symbol	CDSOT236-		Unit
		DSL0312	DSL0324	
Working Peak Voltage	$V_{WM}$	12	24	V
Peak Pulse Current ( $t_p = 8/20 \mu\text{s}$ )	$I_{PPM}$	35	15	A
Peak Pulse Power ( $t_p = 8/20 \mu\text{s}$ )	$PPP$	500		W
ESD (IEC61000-4-2 Contact)		8		kV
ESD (IEC61000-4-2 Air)		15		kV
Operating Temperature	$T_L$	-40 to +125		$^\circ\text{C}$
Storage Temperature	$T_{STG}$	-55 to +150		$^\circ\text{C}$

### Electrical Characteristics, $T_A = 25^\circ\text{C}$ (Unless Otherwise Noted)

Parameter	Test Condition (Note 1)		Min.	Typ.	Max.	Unit
$V_{BR}$ Breakdown Voltage	$I_{BR} = 1 \text{ mA}$	'DSL0312 'DSL0324	14 26			V
$V_C$ Clamping Voltage	$I_P = 1 \text{ A}, 8/20 \mu\text{s}$	'DSL0312 'DSL0324		18 31	20 38	V
$V_C$ Clamping Voltage	$I_P = 10 \text{ A}, t_w = 1 \mu\text{s}$	'DSL0312 'DSL0324		21 37		V
$V_C$ Clamping Voltage	$I_P = 35 \text{ A}, 8/20 \mu\text{s}$ $I_P = 15 \text{ A}, 8/20 \mu\text{s}$	'DSL0312 'DSL0324		34 40		V
$I_D$ Leakage Current	$V_D = V_{WM}$				100	nA
C Capacitance	$V_D = 1 \text{ V}, f = 10 \text{ MHz}, 1 \text{ V}_{rms}$			1.4	5	pF
$\Delta C$ Capacitance Variation	$V_D = 1 \text{ V to } V_{WM}, f = 10 \text{ MHz}, 1 \text{ V}_{rms}$			0.2	2	pF

Note 1: All measurements made between I/O 1 and I/O 2.

\*RoHS Directive 2002/95/EC Jan. 27, 2003 including annex and RoHS Recast 2011/65/EU June 8, 2011. Specifications are subject to change without notice.

The device characteristics and parameters in this data sheet can and do vary in different applications and actual device performance may vary over time. Users should verify actual device performance in their specific applications.

## Applications

- ADSL / VDSL cards
- Personal Digital Assistants (PDAs)
- Mobile phones and accessories
- Portable electronics

## Performance Graphs

### Maximum Current vs. Pulse Duration

### Normalized Capacitance vs. $V_D$

### Clamping Waveform for 'DSL0312 During a 20 A, 8/20 $\mu$ s Surge

### Clamping Waveform for 'DSL0324 During a 10 A, 8/20 $\mu$ s Surge

## Application Information

Communication systems with exposed signal lines are often subjected to high level transient threats. The CDSOT236-DSL03xx family of devices was designed to help protect signal lines from threats such as those defined in Telcordia GR-1089 and ITU-T.

Figure 1 shows the CDSOT236-DSL03xx TVS diode array used in a design topology that protects a VDSL driver. The diode array limits the peak differential voltage across the VDSL driver outputs. The current limiting resistors ( $R_P$ ), typically about 1 ohm, limit the peak current seen by the driver. Low voltage varistors MOV1 and MOV2, with a typical working voltage of less than 20 V, limit the current in the line side of the transformer by limiting

the voltage across it. Exact values for the current limiting resistors and the varistors are dependent on the characteristics of the transformer as well as the sensitivity of the driver to overvoltage/overcurrent conditions. The use of primary protectors downstream from the device will also influence the requirements for this protection circuit design. In applications sensitive to very low levels of leakage current, optional bias resistors  $R_{B1}$  and  $R_{B2}$  can be used. Both resistors would be required for dual supply applications. Only  $R_{B1}$  is required for single supply applications. In this case, the anodes of the diode array should be connected to ground.

Figure 1. VDSL Driver Protection Design Topology

When routing differential signal traces on the PCB, such as in a VDSL application, it is important to maintain symmetry in the routing. Figure 2 below shows an example of how differential traces that connect to the CDSOT236-DSL03xx TVS diode array can be routed. As the signal traces approach the diode array

the traces should be flared out to make the connections with the device and then brought back together on the opposite side of the device. Routing to the next destination would continue from there.

Figure 2. Connecting a Differential Signal to the Model CDSOT236-DSL03xx

## Application Information (Continued)

In applications where the current limiting resistors ( $R_P$  in Figure 1) cannot reduce the current into (or out of) the driver to an acceptable level, the resistors can be replaced with a Bourns® Transient Current Suppressor (TCS™) device as shown in Figure 3. The Model TCS-DL004-750-WH shown in Figure 3 is a dual channel device that has a nominal series resistance of only 1 ohm. The resistance between the two channels is very well matched with a nominal maximum difference of + 0.02 ohms

between the channels. This device has a nominal trigger current of 1.1 amps. The current through the device would be limited to this level with up to 40 V across this device, making it dramatically more effective than a 1 ohm series resistor. Devices with different trigger levels and series resistances are also available. For additional information on the TCS™ family of devices, please consult the data sheets on our website at [http://www.bourns.com/ProductLine.aspx?name=transient\\_current\\_suppressors](http://www.bourns.com/ProductLine.aspx?name=transient_current_suppressors).

Figure 3. VDSL Driver Protection Design with Transient Current Suppressor Technology

Figure 4 shows how the trace routing should be done when the TCS™ device is used in conjunction with the CDSOT236-DSL03xx TVS diode array.

## Packaging Information

The product is packaged in tape and reel format per EIA-481 standard.

Item	Symbol	SOT23-6
Carrier Width	A	$\frac{3.90 \pm 0.10}{(0.154 \pm 0.004)}$
Carrier Length	B	$\frac{3.90 \pm 0.10}{(0.154 \pm 0.004)}$
Carrier Depth	C	$\frac{0.90 \pm 0.10}{(0.035 \pm 0.004)}$
Sprocket Hole	d	$\frac{1.55 \pm 0.05}{(0.061 \pm 0.002)}$
Reel Outside Diameter	D	$\frac{178}{(7.008)}$
Reel Inner Diameter	D <sub>1</sub>	$\frac{50.0}{(1.969)}$ MIN.
Feed Hole Diameter	D <sub>2</sub>	$\frac{13.0 \pm 0.20}{(0.512 \pm 0.008)}$
Sprocket Hole Position	E	$\frac{1.75 \pm 0.10}{(0.069 \pm 0.004)}$
Punch Hole Position	F	$\frac{3.50 \pm 0.05}{(0.138 \pm 0.002)}$
Punch Hole Pitch	P	$\frac{4.00 \pm 0.10}{(0.157 \pm 0.004)}$
Sprocket Hole Pitch	P <sub>0</sub>	$\frac{4.00 \pm 0.10}{(0.157 \pm 0.004)}$
Embossment Center	P <sub>1</sub>	$\frac{2.00 \pm 0.05}{(0.079 \pm 0.002)}$
Overall Tape Thickness	T	$\frac{0.20 \pm 0.10}{(0.008 \pm 0.004)}$
Tape Width	W	$\frac{8.00 \pm 0.20}{(0.315 \pm 0.008)}$
Reel Width	W <sub>1</sub>	$\frac{14.4}{(0.567)}$ MAX.
Quantity per Reel	--	3000
