Consolidation of Sourcing for Bobbins Used in Kaschke Components

Riverside, California – May 2, 2025 – To support growing demand, Bourns is consolidating the sourcing for bobbins used in the manufacturing of [Kaschke Components](#) from two suppliers to one supplier. Currently, bobbins are sourced from internal production but also primarily from a well-established, long-term external supply chain partner. Effective October 31, 2025, bobbins will solely be sourced from this qualified external partner.

There is no change to the form, fit, function, quality, or reliability of the final Kaschke Components. Bobbins from both sources were produced using the same material and meet identical data sheet specifications. Traceability will continue to be maintained through existing lot code and date code. Finished products will remain unchanged.

Samples are available upon request. Bourns recommends that customers test the affected part numbers in their specific applications for verification of satisfactory performance.

Implementation dates are as follows:

Date that deliveries of products manufactured using bobbins from our internal manufacturing will end: **October 31, 2025**

First date code using the above changes: **2545**

If you have any questions or need additional information, please feel free to [contact Customer Service/Inside Sales](#).

Users should verify that the described changes will not impact the performance of the product in their specific applications.
